

Findings-

- 1) Youth unemployment consistently remains higher than overall unemployment, indicating labour market entry challenges.
- 2) Urban unemployment shows greater volatility compared to rural areas.
- 3) Post-pandemic years reflect structural stress in youth employment.

Python Insight- Youth unemployment shows a positive correlation with overall unemployment, indicating higher vulnerability of young workers during periods of labour market stress.

Economic Interpretation-

- 1) Higher youth unemployment reflects skill mismatch and slower absorption into formal labour markets.
- 2) Urban Unemployment suggests sensitivity to economic cycles and persistent urban unemployment suggests structural rigidities rather than seasonal effects.
- 3) Policy focus on skill development and labour-intensive sectors is critical.
- 4) Post-pandemic trends indicate delayed labour market recovery for young workers.
- 5) Persistent youth unemployment highlights the need for targeted skill development and labour-intensive growth.
- 6) Youth unemployment remains persistently higher than aggregate unemployment, reflecting entry barriers and skill mismatch.
